TOPOISOMERASE II MAKES DOUBLE-STRAND BEEAKS.

CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.

SUBUNIT: HOMODIMER (BY SIMILARITY).

SUBUNIT: HOMODIMER (BY SIMILARITY).

SUBCELLULAR LOCATION: Nuclear (BY Similarity).

Oligosaccharides can be produced that, when attached to non-toxic lipids, are useful for Neisseria vacche prepn. Blood group core oligosaccharides, and mimics of lacto-N-neotetraose, gangliosides and saccharide portions of globoglycolipids can also be produced using the enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5 Glycosyltransferases (AAR91311-15) are products of the lgt locus (AAT14061) of Neiserria gonorrhoeae strain F62. Glycosyltransferase LgtD (AAR91314) can be obtd. by expression of the lgtD coding sequence in recombinant host cells. A method for adding GalNAc or GlcNAc betal-3 to Gal comprises contacting a reaction mixture
